PolslPortal

Robert Holajn, Dominik Trygar

Gr. 5, sekcja 1

Description of the work project:

The main purpose of the project is to create a website which will allow students from our university to exchange/sell/buy things e.g. books. Additional functionalities will be included if possible.

What technologies will be used:

We are going to accomplish our goals by using HTML, CSS, JavaScript, PHP, Bootstrap and database technologies like MySQL.

How it will work:

A student will be able to create an account. Verification will be arranged by submitting student's personal university e-mail address. This way only rightful students will be able to proceed with joining the community. After registration, the student will easily configure their profile as wished. From this moment on, they can be a member of online community.

In our visions we would like to provide a very interesting website which is going to be really intuitive and cause no problems to a beginning user. All functionalities will be clear and easy to understand.

Schedule:

Week	Description of goals
1	Project of the website, creating main base of the website, finding out more about technologies to use
2	Working on the webiste's layout
3	Creating and developing database
4	Connecting database and finding out more about PHP
5	Working on functionalities from user's side
6	Developing structure of the website from server's side
7	Adding „Registartion" and „Log In" options
8	Working on addtional functionalities
9	Fixing problems and improving code and working of the website
